

About Sahajanand Technologies:

Company Profile:

Sahajanand Technologies (P) Ltd. was incorporated in 1993, is a name to reckon with as a trendsetter in development of abreast diamond processing equipments, deploying revolutionary Laser light. 'Sahajanand' name uniquely represents leadership in technology transfer and innovation for quality product development. Established in the year 1993 by Mr.Dhirajlal Kotadia, the company has emerged as a pioneer in the diamond industry for its hi-end engineering products.

Company is driven by the motto of continuous innovation to develop products that deliver cutting edge performance with value for money for our customers. We are committed to develop technology solutions for client performance excellence. We have articulated a distinct market sensing mechanism to analyze market trends, customer needs and industry requirements. This brought a unique set of capabilities for us to develop customer centric technology solutions.

We are a leading manufacturer and exporter of Laser technology centered capital equipments for diamond manufacturing industry. We present 'Total technology solutions for diamond industry under one roof.' Our product portfolio broadly includes Diamond Planner Systems, Laser driven Diamond Processing equipments, Auto blocking & Polishing Machines etc. used at different stages of diamond manufacturing process.

Everyday we live the Sahajanand tradition of engineering excellence and core values of quality, safety, integrity, understanding and responsibility. We are also committed to bring these technologies within the reach of every Indian engaged in these industries. By promoting indigenously manufactured technology products, we save valuable foreign exchange and generate employment. We contribute immensely in the growth of the society by actively doing the philanthropic activities in field of health, education and community development.

Being in the industry for more than 15 years, we earned vast experience of dynamics of Diamond Industry. We started from scratch & created a right platform in Indian market. By virtue of this prolonged attachment with the industry & confidence in our capabilities we believed that it is not impossible to develop such technology in India. We followed our instincts & developed a range of hi-tech-yet cost effective products. We have trained our work force to harmonize with Diamond Industry trends & successfully educated thousands of workers to use our machines

Our Business:

Sahajanand Technologies is a hi-tech engineering solution provider for diamond industry. Company is involved in development; manufacturing & marketing of Laser based technological solutions for all stages of diamond processing.

Sahajanand has consistently developed cutting edge laser driven products for diamond industry. The sheer scale of our technological capabilities & customer centric approach differentiates us from our counterparts. Along with our talented professionals; our clients play an active role generating new product ideas and product & process improvements.

Blending best people, skills & technologies, we have helped our clients create a hi-performance business for them.

We create technological solutions for our clients for three major processing stages.

➤ **Diamond Analysis & Planning**

Our advanced Magnus planners are designed to assist the diamanteers to gain maximum value from rough diamond. With value we mean creating best possible yield, grading & beauty out of rough. Magnus Planners assist in analyzing & planning rough diamond, considering all critical aspects like indentations, cavities, inclusions, cut grading proportions etc. and imitates the desired best value plan with quality marking lines as a guideline for further diamond processing.

➤ **Diamond Processing**

Our Lazer systems provide diamond processing solutions utilizing cutting edge Laser technology for diamond industry. Lazer systems provide sawing, cutting & bruting facilities. Laser technology provides high productivity, automation, elimination of finishing operations, reduced processing cost & improved up time. Apart from above advantages our diamond processing systems provide safety and reliability.

➤ **Diamond Auto-blocking & Polishing**

We produce most sophisticated microcontroller based Automatic blocking machines and Polishing machines. The machines are innovative, compact and robust designed for vibration free and quiet operation. The machines can polish all types and sizes of processed rough stones with desired cut grading proportions with extremely user friendly operation.

Sahajanand is committed to bring these technologies within the reach of every Indian engaged in the industry. By promoting cutting edge technology products, we have saved valuable foreign exchange and generated enormous employment opportunities in Indian Diamond Industry.
